

RESOL press release

Hattingen, 09 August 2013

The new DL2 Datalogger Version 2 – Now with even more functionality

With the new DL2 V2 Datalogger, owners of systems that are connected to the Internet can now use the VBus.net service portal. System access is possible with just a few clicks via VBus.net – without any network knowledge or tedious router configuration. Due to the user-friendliness, system data can be easily processed and visualized.

The popular, freely definable live data display and diagram functions are also available.

The VBus.net functionality is now available for all DL2 Dataloggers beginning with firmware version 2.0.0. DL2 which have already been purchased can be updated with the new firmware available at www.resol.de/firmware.

The new RESOL product video VBus.net at www.resol.com presents the many possibilities of VBus.net in just a few minutes.

Further information about the large RESOL product portfolio can be found at www.resol.com
