Hattingen, 24th April 2009

New RESOL swimming pool controller

The DeltaSol[®] family has gained a new offspring once again – the new DeltaSol[®] MiniPool is the smaller brother of the popular DeltaSol[®] Pool. The new family member controls the heating of a swimming pool by means of solar collectors and optimised operation of the filter system. The MiniPool is the successor of the DeltaSol[®] KS and offers a number of different options such as a maximum limitation of flow temperature, a pool cooling function and a flushing function. Additionally, it is equipped with a function control which shows whether the system runs faultlessly or if there is an error. Via the RESOL VBus[®], the DeltaSol[®] MiniPool controller can easily be connected to additional modules such as the RESOL DL2 Datalogger, a remote display such as the GA3 or – by using the VBus[®]/USB interface adapter – to a personal computer. The DeltaSol[®] MiniPool opens a whole range of new RESOL-products to be released this spring. With its many and versatile functions, it is an ideal addition to the product portfolio.
