

RESOL press release

Hattingen, 12 February 2015

New from RESOL: VBus® Touch Trainer

The new RESOL app VBus® Touch Trainer is ideal for all who wish to train – themselves or others – in operating RESOL controllers. The app simulates a controller in real-life operation – all sensor inputs can be fed with freely adjustable values, all relay outputs are displayed with their status and pump speed. Thus, users can follow and comprehend functions or try out controller reactions.

VBus® Touch Trainer is available free of charge, the DeltaTherm® HC mini controller is included in the basic version. Further controllers can be purchased from within the app.

All controllers in VBus® Touch Trainer run with the current firmware. Of course, all

menu languages available in the “real” controller are also available in the app.

Operation is really easy, buttons and controls have the same function as in the real controllers.

Further information can be found at www.resol.com
