

RESOL press release

Hattingen, 03 March 2015

A perfect match – the RESOL DeltaTherm® HC mini and the VBus® Touch HC App

The **DeltaTherm® HC mini** offers a compact and user-friendly solution for simple heating systems. It can control a weather-compensated heating circuit and its afterheating demand. Additionally, there's a choice of 5 different operating modes, a boiler protection option and a night correction.

With **VBus® Touch HC**, you can adjust your RESOL heating controller from a mobile device. Thus, e. g. the operating mode can be set via the app. Additionally, the system data are displayed in a clearly arranged graphic.

Operating VBus® Touch HC is easy and intuitive. You can use the following functions:

- Virtual remote control – adjust the heating curve, activate the rapid heat-up or deactivate the heating circuit
- Correction timer – adjust time frames for day or night correction
- Operating mode switch – change the operating mode of the heating circuit
- Read out system data – in a clearly arranged graphic

With the RESOL RPT software, the DeltaTherm® HC mini can be parameterised effortlessly from a PC, and with the RESOL Internet service portal www.VBus.net, system data can be visualised and evaluated.

Further information about the DeltaTherm® HC mini and VBus® Touch HC can be found at www.resol.com.
