

RESOL press release

Hattingen, 28 April 2015

New and ideal for thermosiphon systems – the RESOL TT2

With the TT2 Thermostat controller, the well-known RESOL quality is now available for thermosiphon solar systems as well! With the integrated timer, pleasantly hot water will always be available at the right time. By means of the rapid heat-up function, hot water can also be quickly provided outside the usual time frames – even from the living area, when the RCTT Remote control is used.

The TT2 is especially designed for the electric backup heating of a DHW store and is equipped with two high-current relays to which an electric immersion heater of up to 3.6 kW (230 V~) / 1.8 kW (115 V~) can be connected. No additional auxiliary relays are required.

Further information on the RESOL product portfolio can be found at www.resol.com
