

## RESOL press release

Hattingen, 11 February 2016

### Update your DeltaSol® MX – firmware version 2.0 is packed with new features

For the DeltaSol® MX, the largest and most versatile system controller of the RESOL product family, a new and vastly extended firmware is available now!

Version 2.0 contains groundbreaking new features such as 0-10 V boiler control for modulating boiler demand, a DHW preheating and a return mixing function as well as basic solar systems also for 3 collector fields.

The heating circuits can be used for cooling purposes and enable condensation detection by means of a dew point switch. Furthermore, a number of energy-saving and efficiency-boosting functions have been added.

With this update, the MX reaches ErP temperature controls class I, III and VIII and thus delivers an energy efficiency contribution of up to 5 %.
