

RESOL press release

Hattingen, 14 September 2017

Update for the DeltaTherm® HC mini

The DeltaTherm® HC mini heating controller has been updated to firmware version 1.01. In this new version, the controller does not only fulfil the requirements of temperature controls class III, but also those of ErP class VIII. Weather-compensated control with room influence or demand-based control with up to 3 room temperature sensors is possible. The DeltaTherm® HC mini thus delivers an energy efficiency contribution of up to 5 % for energy labelling.

Furthermore, the update contains new features such as 0-10 V boiler control for modulating heating demand.

Remote access to the heating circuit is easily and comfortably possible with the RCP12 Room control unit or the VBus® Touch HC app.

The update is free of charge and can be downloaded at www.resol.com.

Further information about the DeltaTherm® HC mini and the large RESOL product portfolio can be found at www.resol.com
