

RESOL press release

Hattingen, 29 October 2019

RESOL DeltaTherm[®] PHM – the Power-to-Heat manager for the intelligent distribution of PV current

The DeltaTherm[®] PHM is the ideal solution for using self-produced PV current for the control of different loads. By intelligently distributing the current available, the controller optimises self-consumption.

Heat pumps, charging stations for electric vehicles and up to 3 electric immersion heaters can be controlled as needed. All the while household power has absolute priority.

Each load can also be supplied with mains current on a time-controlled basis. Furthermore, the DeltaTherm[®] PHM measures the electric loads at the energy meter which can be visualised via VBus.net.

The DeltaTherm[®] PHM can be used with all PV systems.
