

RESOL press release

Hattingen, 01 June 2021

New at RESOL – the LIN-Check, a testing device for LIN bus pumps

The LIN-Check extends our broad range of tools for the specialised craftsman. It enables an easy functional check and error diagnosis for LIN bus pumps.

The Local Interconnect Network – the full name of what is called LIN bus – is a serial field bus network protocol for sensors and actuators. Originally an industry standard, it has since been incorporated into ISO standardisation.

The LIN-Check controls the pump and reads out data as well as error codes. Thus, the correct functioning of the LIN bus connection can be checked easily and reliably.

The practical storage bag and the robust housing make the LIN-Check ideal for daily application.
