Hattingen, 09 January 2025

### **DeltaTherm<sup>®</sup> HC Plus – the heating controller for winter **AND** summer**

Our heating controller family has grown.

The DeltaTherm<sup>®</sup> HC Plus can control 2 weather-compensated heating circuits and their backup heating demands, with extension modules even up to 7. For each heating circuit it can also take over the demand-based cooling by means of a humidity sensor for dew point calculation.

Numerous functions such as screed drying, heat pump demand or the modulating heating control with 0-10 V boiler control offer a wide range of possibilities. Remote access is possible with a room control unit or via the VBus<sup>®</sup> Touch HC app. The controller can be connected to the Internet by means of a KM2 communication module or a DL2 Plus datalogger in order to use e.g. VBus.net, the Internet portal for easy and secure access to your system data.
