

## RESOL press release

Hattingen, 17 October 2012

### The DeltaSol® BX: Complex systems – simply mastered!

The RESOL DeltaSol® BX system controller offers a variety of possible applications with its four relay outputs and seven sensor inputs. The BX offers an extra large display with an intuitive operating concept.

Pre-programmed system layouts can be extended by a number of different functions: a thermal disinfection function, a heat dump option, a drainback option and many more.

Additionally, the BX offers an SD card slot for integrated data logging and a RESOL VBus® interface for connecting accessories. Of course, the BX is certified for the North American market.
