

RESOL press release

Hattingen, 03 May 2013

New at RESOL's – the DeltaSol® SLT

At this year's **intersolar** trade fair in Munich, RESOL will be presenting the second controller from the new SL controller series, the DeltaSol® SLT. With its four relay outputs, five sensor inputs and the modular control concept it offers a broad range of possibilities.

The DeltaSol® SLT with the SLider closed and open respectively

The DeltaSol® SLT effortlessly controls even complex systems. 27 pre-configured system layouts with numerous pre-programmed optional functions such as thermal disinfection or zone loading enable adaptation to the individual system requirements. The operation via two main buttons and one adjustment dial, the Lightwheel®, still follows the well-known operating concept. The multicoloured LED, integrated in the Lightwheel®, offers many possibilities to signal different system states. The microSD card

slot, the mini USB connection and the two microbuttons for quick access to the manual mode and the holiday function are located underneath the slidable housing cover, the SLider.

The new RESOL controller scores with its slim design and the extensive equipment. The LAN connection makes direct communication to a PC or network possible, the integrated microSD card slot enables data logging, transferring and storing settings as well as running firmware updates.

Further information about the DeltaSol® SLT and the large RESOL product portfolio can be found at www.resol.com
