Hattingen, 2013-09-16

The WMZ energy metering module – now with imperial units

Our popular WMZ energy metering module is now available in a new version with a commissioning menu for easy configuration and imperial temperature and volume units especially for the North American market.

The commissioning menu helps the user configure the module by leading through the most important adjustments step by step. When the commissioning menu has been completed, the module is ready for normal operation.

Several values can now optionally be indicated in imperial values. Temperatures can be indicated in degrees Fahrenheit as well as Celsius, the energy metering can be displayed in MBTU or kWh and the flow rate indication is now available in gallons per minute and in liters per hour.

Of course, the new WMZ energy metering module is available in different versions for voltages from 12 VDC to 230 VAC.
