

RESOL press release

Hattingen, 10 March 2014

RESOL FK Solid fuel boiler controller – the solid fuel boiler specialist!

The FK controller has been developed especially for systems with solid fuel boilers, water heating stoves or pellet stove heating systems. Due to its commissioning menu and the well-known operating concept, configuration is particularly quick and easy.

The user can choose from 8 standard solid fuel boiler systems. The controller enables e. g. the control of an electronic mixer for the return mixing function, a thermostatic afterheating or a target temperature control. Up to 2 high-efficiency pumps can be speed-controlled with the integrated PWM outputs. In total, 2 relay outputs and 4 sensor inputs are available. The full graphic display comprehensively shows the different balance and measurement values of the controller. Via the RESOL VBus®, further accessories such as the SDFK Smart Display can be connected. With the SDFK, the solid fuel boiler and store temperatures as well as the pump status can be visualised. The Smart Display is also supplied with power via the VBus®, an additional power supply is not necessary.

Further information about the FK Solid fuel boiler controller and the large RESOL product portfolio can be found at www.resol.com
