

## RESOL press release

Hattingen, 10 March 2014

### The network connection for your system – the KM1 communication module

The KM1 communication module is the network connection for solar and heating systems, especially suited for technicians managing large systems, heating installers and home owners who like to keep a close eye on their system.

With the KM1, the system can be monitored over the Internet. VBus.net e. g. enables system yield monitoring in a comprehensive system graphic.

Additionally, comfortable system parameterisation via RESOL ServiceCenter software or RESOL RPT parameterisation tool is possible. The KM1 communication module is suitable for all RESOL controllers equipped with a VBus® data interface.

Further information about the KM1 and the large RESOL product portfolio can be found at [www.resol.com](http://www.resol.com)
