

Feel the heat!

VBus®Touch – the solar system at your fingertips

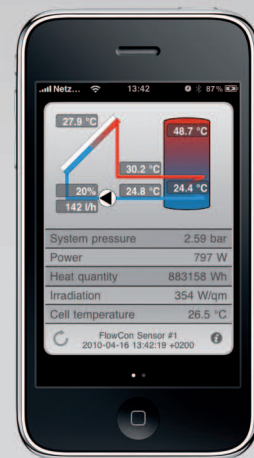

Visualization was yesterday – VBus®Touch is now!

The RESOL app for the Apple **iPad** makes your solar yield palpable – worldwide. A touch of your finger is all you need to view detailed temperature charts, generate yield balances and monitor the system status.

The VBus®Touch software is of course compatible with the **iPhone** and the **iPod touch** as well.

To visualize your individual system, a RESOL controller with VBus® data interface and a DL2 datalogger are required.

The basic version of the VBus®Touch app is available for download **free of charge** on the App Store. More features and extensions are under way.

VBus® is a registered trademark of RESOL GmbH
App Store, iPad, iPod touch and iPhone are registered trademarks of Apple Inc.

A new dimension in system monitoring!

With VBus®Touch, you've got your solar system at your fingertips wherever you are. You can switch back and forth between different display charts and run your finger along a graph to monitor temperature developments to-the-minute.

To visualize your individual system with VBus®Touch, a RESOL controller with VBus® data interface (e. g. *DeltaSol® BX*), connected to the Internet via a DL2 datalogger, is required.
